3D PRINTING
SYSTEMS
Unleash your creativity

With your Inspire 3D Printer you can start printing professional and functional parts in tough ABS plastic right on your desk.

The Inspire® range of Rapid Prototyping 3D Printers from TierTime Technology Co. Ltd founded in 2003 are the largest producer of 3D Printers in the Chinese market. Backed by 10 years of R&D, the Inspire range of 3D Printers offers you affordable professional 3D Printers that can produce high quality and durable ABS 3D models for prototyping or end-use parts.

The Inspire® 3D Printers can run unattended, they require little maintenance and do not need hazardous chemicals to remove support material.

Smart Support Material - Snap off

The Inspire® range of 3D Printers can run in two modes.

Single nozzle mode, creates parts in higher resolution, both the part and support are printed in the same tough ABS plastic and support is break away.

Dual nozzle mode, creates the part in tough ABS and the support material in an easier to break away ABS plastic.

Make strong quality parts in just 3 easy steps.

- 1 Design your part.** Create your model in your favourite 3D CAD software and export as an STL file.
- 2 Click "print"** using the included Smart 3D Printer software. The software automatically calculates required supports and prints your part in tough ABS.
- 3 Remove Supports.** Remove the completed print and simply break away any support material. No dangerous chemicals required!

SPECIFICATION	INSPIRE S200	INSPIRE S250	INSPIRE D255	INSPIRE D290
Build Volume	200x200x150mm (6 litres)	250x200x150mm (7.5 litres)	310x255x255mm (20.2 litres)	320x290x255mm (23.7 litres)
